

name of the module	SCIENTIFIC APPROACH AND PROJECT MANAGEMENT (Végé LAB)
start	When the student is free during the year
Duration /time scale repartition	1 week to start + bibliographic home work (4 months) + 5 weeks in labs for the practical application of the project.
location	Partly at the University of Strasbourg and in majority at the home university for a bibliographic work
contact person	Schmit Anne-Catherine
ECTS (regular/max)	9 ECTS
examination	Reports + oral presentations
graded	yes
description of content (approx. ½ page)	<p>This module needs first that the student finds a topic of interest in collaboration with a group leader of the IBMP (www.ibmp.cnrs.fr). Then (s)he will establish a working programme in order to establish his personal research project in agreement with the group leader on his own topic of interest. After a bibliographic review on this topic and the building of an experimental project (work which can be done in his home country), (s)he will present it through a poster and an oral presentation in English. Finally, (s)he will carry out the project proposal at the IBMP lab during an internship of about 5 weeks. This period can be chosen all along the year, during a free time of the own university. The estimated duration for this module is 5 months.</p> <p>The added value of this module is the possibility to build and manage a personal project.</p>
